

Project CSI-PI

EETT 2010-2011

Update

The 2010-2011 EETT grant project CSI-Pi is in full swing, bringing with it new and exciting technology for our 8th grade students. This year's project is focusing on integrating technology into the Science and Math curriculum, with an emphasis on reading in the content areas. In the 8th grade science and math classes, the students have been using laptop computers, iPods, student response systems, digital science probes, and online virtual tools. As this project progresses over the next two years, we expect to see substantial growth in the students' 21st Century skills, along with growth in technology literacy.

For more information on Project CSI-Pi, go to:

<http://www.columbia.k12.fl.us/TechLab/csipi.htm>

At this site, please watch for the "Parent" tab that will be coming soon with activities and links to keep students actively involved with technology over the summer.
